- **Profile:** I am a motivated and detail-oriented Java developer with 1.5 years of learning experience. I have a solid understanding of the entire web application development process, from gathering requirements to deployment. I'm skilled in building RESTful APIs in Java using Spring Boot, following best practices. Additionally, I have fundamental knowledge about frontend development using the Angular.
- **Education:** I complete my graduation on major STATISTICS (Science background) from University of Barishal (2019-2023).
- **Skills:**
  - **Java** [ java standard edition, java web (JDBC, JPA, Servlet...)]
  - **Spring** [ Spring boot, Spring Security, Spring Batch, and more...]
  - **SQL** [ PostgreSQL]
  - Manual Testing
  - Gradle, Git, Docker
  - **Learning-** Spring Cloud, Angular.
- **Personal Projects:**
  - **1.Restful api operation with different database integration:** This project includes the different database integration and restful api that perform crud operation.
  - **2.Multi module gradle project with multi data source config:** This project gives good understanding how multi module grade spring boot project setup and how multi data source setup both for spring data jpa and sql schema file.
  - **3.This project introduces command and query responsibility segregation (CQRS):** design pattern in Spring Boot to build rest api. This design pattern helps you to separate different state of operation and keeps your controller class clean.
